

GOD IS ALL POWERFUL

In the design and workings of the universe we see a reflection of the perfection and sovereignty of our master designer creator and God.

HE IS ALL POWERFUL (OMNIPOTENT)

All that the Bible says about God and what he has done is truth, God never changes, nor does his word.

Mal 3:6 For I am the LORD, I change not;

The theories of origins are altered as we find new evidence but not our Lord, He created the heaven and the earth, then he created the light and divided the light from the darkness, giving us a working day, then he made a space, (that he called heaven) that divided the waters below (WHICH HE CALLED SEAS) from the waters that were above.

SURF AND SOIL

Again God spoke and the Sea was gathered together and the dry land appeared onto which the Lord caused all the vegetation to grow, each plant with seed or fruit with the seed within it, and God saw that it was good.

Vegetation is the primary source of food in the food chain, only plants can take raw elements from the earth and convert them to food and oxygen, that's how it was in the beginning before sin put its stain on Gods beautiful creation

Now another amazing thing happens, God speaks into existence that which had never been before.

Gen.1:20 And God said, Let the waters bring forth abundantly the moving creature that hath life,

THE LARGEST WAS NOT LAST

Gen.1:21 And God created great whales, and every living creature that moveth, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind: and God saw that it was good.

Notice it was the sea creatures that came into existence first, not just one or two, but myriads of them in one day, V 20-21 after their kind, our God is a God of order, though there is a multitude of varieties yet everything reproduces after its own kind. On the same day the birds were created, again everything reproducing after it's own kind, and the fossils that the archeologists find today show the same characteristics as when God created them just over 6000 years ago, everything reproducing itself after it's own kind. This solves the age old problem, which came first the chicken or the egg? The bird was created on day four which laid the egg.

Scientist today observe that there are horizontal boundaries beyond which life cannot vary in reproduction.

WHALE AMONG THE VINEYARDS

The entire skeleton of a 10 metre-long (30ft) whale has been unearthed from an Italian vineyard in the province of Siena. The region is renowned for its wine, but increasingly is acting as a "magnet for paleontologists" given the large numbers of marine fossils discovered there— e.g. a dolphin skeleton was found in the area a few years ago.

How could an entire whale and dolphin have been buried intact, along with many other marine creatures, in what today is a picturesque farming area? It must have been an unusual and very violent event! Such fossils found right around the world, even in the highest mountain ranges, are consistent with the expected legacy of the global Flood of Genesis 6-9 (taken from Answers in Genesis 2007)

Then in **Gen.1:24 And God said, Let the earth bring forth the living creature after his kind, cattle, and creeping thing, and beast of the earth after his kind: and it was so.**

Here we have the creation of all the land creatures, from the giant Behemoth and leviathan and the smaller dinosaurs, the cattle and the creeping things, some have adapted to special circumstances in which they live, but there are no new kinds, lizards still produce lizards, birds still produce birds.

Man is an inquisitive being, so God has given us this book so we can know and understand how he brought everything into existence, if we know the truth we will recognize error when it comes before us. Not only is God all powerful but (omnipresent) that he is present every where at all times as

1 Kings. 8:27 But will God indeed dwell on the earth? Behold, the heaven and heaven of heavens cannot contain thee;

God is not limited by space or time, God is a spirit and we cannot understand this reality while in the flesh. A little boy put it well when he said, God is so big he doesn't have to go anywhere.

God has another mighty attribute, that is all knowing that he is (omniscient), his knowledge is infinite, he comprehends all things.

We cannot understand a person who knows everything, remembers all things past, knows all that is going to happen. There are many instances in the Bible where God spoke through the prophets of things that were going to happen, hundreds and even thousands of years before they came to pass. God is still revealing the beauty and intricacies of his creation, each time a more powerful microscope is made we see more marvels of the substances God has created.

Last century scientists, through the use of powerful microscopes observed that the atom,(which was thought to be the smallest part of matter) to be made of smaller parts of material revolving around a centre called the nucleus in a similar manner to our solar system. And now scientists are wondering if this is the lower limit, or are there smaller particles within this miniature system. Here is the stamp and seal of God deeply imprinted on His creation.

The Bible is the only book with such a basic realistic comprehensive and unchanging description of creation, even as Isaiah the prophet questions us in

Isa. 40:28 Hast thou not known? hast thou not heard, that the everlasting God, the LORD, the Creator of the ends of the earth, fainteth not, neither is weary? There is no searching of his understanding.

MATHEMATICAL MICROBES

There are microorganisms which 'are smarter than we thought', says New Scientist. Rather than moving randomly, amoebae and plankton somehow know the mathematically optimal pathways when foraging for food. For example, researchers monitored the angles of up to 1,000 turns made by five species of Daphnia zooplankton in water laced with food particles. The (multicelled) Daphnia's preferred turning angle of about 36 degrees closely matches computer model for maximizing food collection within a fixed space and time,

If Daphnia's turning angle were any greater or lesser, they would be less successful, say the researchers.

Evolutionists have long portrayed some 'basic', single-celled organism as the 'primitive'

ancestor of all life. In reality, all living things— including microbes— are highly complex, and the more that is known about them, the harder it is to escape the fact that they've been beautifully **designed** (Romans 1:20 according to their **kind** (Genesis 1
(Taken from Answer in Genesis 2007)

All that is written in the Bible matches with the evidence we see around us, such as everything reproducing after it's own kind, and a multitude of fossils buried in rock layers laid down by water all over the world, plainly revealing that there was a world wide flood, destroying everything except Noah and his family.

Even bacterial cells thought to be one of the simplest living systems are exceeding complex, and in effect a veritable factory containing exquisitely designed molecular machinery, made up of 100,000 million atoms such as the Flajellam or A.T.P. Motor that can rotate at 10,000 RPM and which is made up of 40 perfectly designed and manufactured structural parts.

No one in their right mind would believe all this happened by chance Random Process, let alone all the intricate creations we see every day.

*O Lord my God, when I awesome wonder
Consider all the works Thy hand hath made,
I see the stars, I hear the mighty thunder,
Thy power through all the universe displayed
Carl Gustaf Boberg 1856-1940*

*To God be the glory! Great things He hath done!
So Loved he the world that he gave us His Son;
Who yielded His life an atonement for sin,
And opened the life gate that all may go in.
Fanny Crosby 1820-1915*
